

Pneumatics for the 21st century...

Built upon history

KREUTER MANUFACTURING COMPANY

VCB-41/42
Series
Pneumatic
Ball Valves

KREUTER Pneumatics by KMC Controls

Air. What would we do without it? Many buildings are still operated by venerable air-powered controls, and we support the long legacy of cost-effective, durable, and reliable pneumatics.

Pneumatics for the 21st century

KREUTER Pneumatics by KMC Controls

We pioneered pneumatic control devices for HVAC applications. We were leading participants as analog electronic controls took hold in building system design. Later, we established a complete line of fully programmable digital products to fulfill the toughest challenges in today's building automation and energy management arenas.

Today, we design and manufacture our own actuators, valves, control devices, and all the accessories needed to create complete and efficient systems. From legacy pneumatics to the latest digital technology, KMC Controls offers you a comprehensive line of HVAC products to put you in control.

Our venerated pneumatic products may not have the glamor of the latest digital devices, but they still fill a vital role in cost-effectively sustaining older installations. While other manufacturers have relegated pneumatics to obsolescence, we still provide innovative, quality products. For example, our new VCB-41/42/46 series ball valves with MCP-3631 series rotary pneumatic actuators give a new level of flexible control in pneumatic applications. The three-way VCB-46 can be used in both **mixing and diverting** applications, depending only on how it is connected. Plus, all the VCB valves' fail direction can be easily changed in the field if necessary by just flipping over the actuator. KMC is the only manufacturer to offer the advantages of ball valves for pneumatic installations. The VCB-41/42/46s are the industry's only pneumatic control ball valves!

Our robust devices are built with exacting care. The quality processes of KMC Controls have been certified to ISO 9001 standards. Strict quality control ensures every component is properly designed and manufactured for long-term product reliability and performance. Our pneumatics are better than ever and ready to support your applications well into the 21st century.
